

# Child and Adolescent Treatment for Trauma and Sleep (CHATTS)

The Flinders Sleep and Psychology Laboratory is conducting **a research study** investigating how a combined treatment can be used to help children who have experienced a traumatic event.

## What's Involved

### Initial Assessment

An initial interview, questionnaires and sleep tracking one week prior to starting therapy

### 10 Sessions of CBT for Children

10 sessions of cognitive behavioural therapy (CBT) for sleep and trauma with a trained therapist

### Follow-up Assessments

An interview, questionnaires and sleep tracking after therapy and at a 3-month follow-up

Children aged **13-18 years** can participate if they have been exposed to a trauma and are experiencing symptoms of posttraumatic stress and sleep disturbance.
